

Dr. Jens Blotevogel

- Research Assistant Professor, Department of Civil & Environmental Engineering, Colorado State University
- Research Scientist, Center for Contaminant Hydrology
- Principal Investigator, The University Consortium

Dr. Blotevogel is a Research Assistant Professor in the Department of Civil & Environmental Engineering at Colorado State University (CSU). He holds a Dipl.-Ing. in Environmental Engineering from the Technical University Berlin and a Ph.D. in Environmental Chemistry from CSU.

Dr. Blotevogel's main research thrusts are:

- Groundwater remediation technologies for the destruction of persistent organic contaminants
- Theoretical models for the prediction of degradation pathways, kinetics, and mechanisms
- Advanced target and non-target analytical methods with focus on high-resolution mass spectrometry
- Environmental impact studies

Dr. Blotevogel started his professional career 14 years ago as project engineer for groundwater remediation with Arcadis. After three years working on site characterization, *in situ* remediation, and natural attenuation, he returned to academia to obtain his Ph.D. under Drs. Thomas Borch and Tom Sale at CSU.

The Blotevogel group at CSU's Center for Contaminant Hydrology is a team of interdisciplinary scientists (analytical and environmental chemistry, biochemistry) and engineers (civil, environmental, chemical) working on the degradation of emerging contaminants in both natural and engineered systems. Recognizing the key role of redox chemistry in contaminant transformation, their focus is on enhancing chemical and biological electron transfer and tracking the fate of transient intermediate products.

The team's current work is aimed at:

- (Bio)electrochemical oxidation and reduction of persistent compounds such as 1,4-dioxane, per- and polyfluoroalkyl substances (PFAS), and perchlorate in mixed contaminant plumes
- Ultra-high-resolution mass spectrometry ("petroleomics") for the characterization of polar hydrocarbons in weathered plumes and identification of biomarkers
- Natural attenuation, enhanced aerobic biodegradation, and advanced oxidation of nitroaromatic compounds
- Beneficial reuse of oil & gas produced water for crop irrigation and livestock watering
- Combined chemical and toxicological characterization for the assessment of complex contaminant mixtures
