

## Dr. John Cherry

- Director, The University Consortium
- Adjunct Professor, University of Guelph
- Distinguished Professor Emeritus, University of Waterloo

John A. Cherry holds geological engineering degrees from the University of Saskatchewan and University of California Berkley, and earned a Ph.D. in hydrogeology from the University of Illinois. He joined the faculty at the University of Waterloo in 1971 for field research on the migration and fate of contaminants in groundwater and their remediation. He retired from Waterloo in 2006, where he held the Research Chair in Contaminant Hydrology, but he continues research as a Distinguished Professor Emeritus, and is also an Honorary Professor at the University of Hong Kong.

He co-authored the textbook “Groundwater” with R.A. Freeze (1979) and co-edited and co-authored several chapters in the book “Dense Chlorinated Solvents and Other DNAPLs in Groundwater” (1996). As a follow-up to that textbook, he initiated a project in 2017 involving more than 100 experts from 12 countries on five continents to create an online comprehensive groundwater textbook with supporting learning materials for global availability free of charge.

He has participated in the development of technologies for groundwater monitoring and remediation and co-holds several patents. He has received many awards and honors from scientific and professional organizations in Canada, the USA, and UK. In 2016, he was awarded the Lee Kuan Yew Water Prize (Singapore) for global contributions to groundwater science and technology. He is a Foreign Member of the U.S. National Academy of Engineering, Fellow of the Royal Society of Canada and holds an honorary doctorate from the University of Neuchatel. He was the Chair (2012-2014) of the Canadian Expert Panel on Environmental Impacts of Shale Gas Development (fracking).

He is an advisor to the Government of Singapore and is Co-chair of the International Scientific Advisory Committee (ISAC) Chinese Research Academy of Environmental Science (CRAES), which is part of the China Ministry of Environmental Protection.

His current research involves collaborative studies of:

- 1) the chemical evolution of natural and contaminated groundwater in unfractured and fractured aquifers and aquitards
- 2) advancement of engineered monitoring systems for groundwater flow and hydrogeochemistry
- 3) use of portable drills to create small capacity wells for safe drinking water in developing countries
